Continuation of Disposition of Claims: Claims pending in the application are 1-8,11-14,17,31-41,48,59-70,73-76,79,83,86,87,105-114,116,118,120 and 122-133.

Continuation of Disposition of Claims: Claims subject to restriction and/or election requirement are 1-8,11-14,17,31-41,48,59-70,73-76,79,83,86,87,105-114,116,118,120 and 122-133.

Art Unit: 1647

## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Group I. Claim(s) 1-8, 11-14, 17, 127, 129, and 130 are drawn to a DNA sequence encoding a fusion peptide classified in class 536 subclass 23.1.
- Group II. Claim(s) 31-41, 105-114, 120, 122 are drawn to a method for decreasing fertility in an animal classified in class 514, subclass 12.
- Group III. Claim(s) 48, 59-70, 73-76, 79, 83, 86-87, 123, 124, 125, 126, and 128 are drawn to a method for killing or inhibiting the growth of a cell in a hormone-dependent or ligand-dependent tumor in a mammal classified in class 514 subclass 12.
- Group IV. Claim(s) 116 and 118 are drawn to a method for selectively reducing the number of viable gonadotrophic cells in the pituitary of an animal classified in class 514 subclass 12.
- Group V. Claims 131-133 are drawn to a vector wherein the DNA sequence is operatively linked to an acute-phase responsive promoter classified in class 435 subclass 320.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the estrogen can be used in a method for decreasing fertility in an animal.

Art Unit: 1647

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, a growth inhibitor agent can be used in a method for killing or inhibiting the growth of a cell.

Inventions I and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, an antisense can be used in a method for selectively reducing the number of viable gonadotrophic cells.

Inventions I and V are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, the vector can have another DNA sequence encoding a polypeptide inserted in the vector instead of the DNA encoding a fusion peptide in the instant application.

The methods of groups II, III, IV, and V can be shown to be distinct as they each have different starting materials, method steps, and/or goals. Each of the methods can be shown to be distinct from the each of the products in that the product is either not used by the method or can be used in multiple methods.

Art Unit: 1647

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and the necessity of non-coextensive non-patent literature searches, restriction for examination purposes as indicated is proper.

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained.

Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Art Unit: 1647

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

## Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ian Dang whose telephone number is (571) 272-5014. The examiner can normally be reached on Monday-Friday from 9am to 5pm. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brenda Brumback can be reached on (571) 272-0961. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
